

## Installation of Solar Panel (Optional)

- 1 Choose a location with maximum sunlight exposure year-round for the solar panel. Only a few hours of direct sunlight daily are needed to power your camera. Note that the solar panel's energy production can vary depending on weather, seasons, and location
- 2 Secure the base to your mounting location using the provided screws
- 3 Insert the locking screw cap into the universal joint, then screw the circular socket nut into the universal joint
- 4 Attach the universal joint to the back of the solar panel and tighten it securely with the nut
- 5 Screw the locking screw cap into the base, ensuring the universal joint is angled upward
- 6 To adjust the solar panel's left or right position, loosen the locking screw cap, rotate the sleeve rod, and tighten the cap when the panel is correctly positioned
- 7 Adjust the solar panel's angle up or down, to maximum of 90°

**Note:** After completing the installation, ensure all locking mechanisms are securely tightened.
